

Sharepoint V3 Active Directory Authentication

Add the lines below directly after the </configSections> in web.config

```
<connectionStrings>
  <add connectionString="LDAP://domain.internal/DC=domain,DC=internal"
    name="ADConnString"/>
</connectionStrings>
```

Add the lines below directly after the <machineKey ../ and before </system.web> in web.config

```
<membership defaultProvider="ADProvider">
  <providers>
    <add name="ADProvider"
      type="System.Web.Security.ActiveDirectoryMembershipProvider,
      System.Web, Version=2.0.0.0, Culture=neutral,
      PublicKeyToken=b03f5f7f11d50a3a"
      connectionStringName="ADConnString"
      connectionUsername="domainuser"
      connectionPassword="secret"
      attributeMapUsername="SAMAccountName"/>
  </providers>
</membership>
```

From my tests the connectionUsername and connectionPassword can be deleted....
